# Events

- This is an app for collecting the events on your daily live
- The Basic version of the app is shown below
- Long press on map and enter the event in the pop alert view

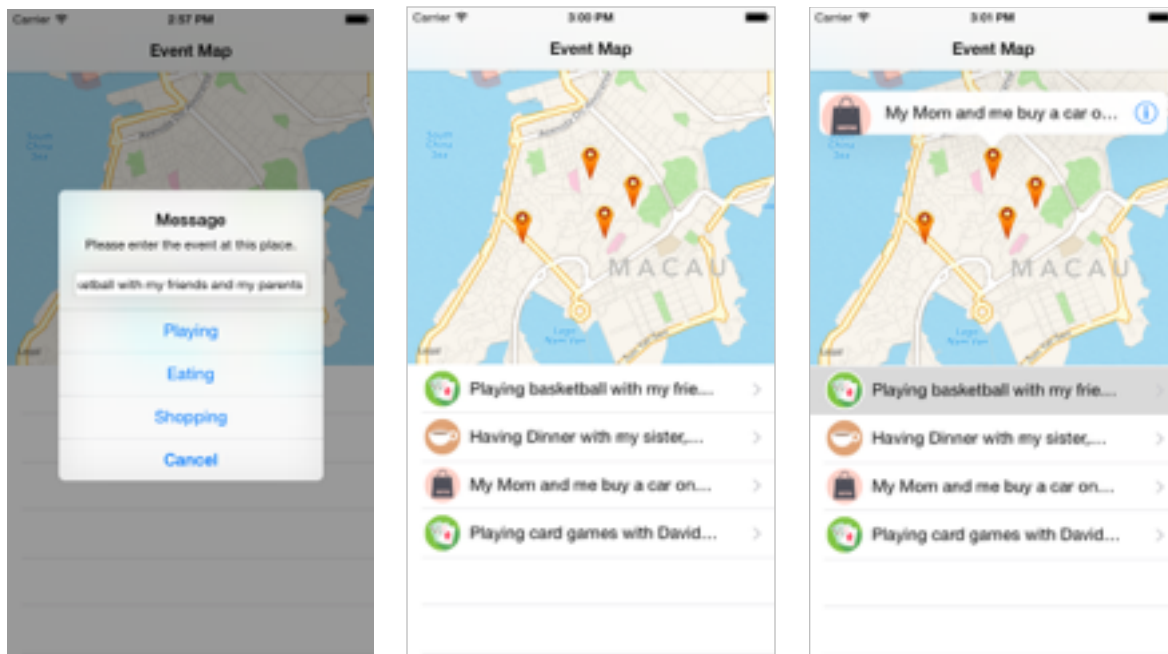

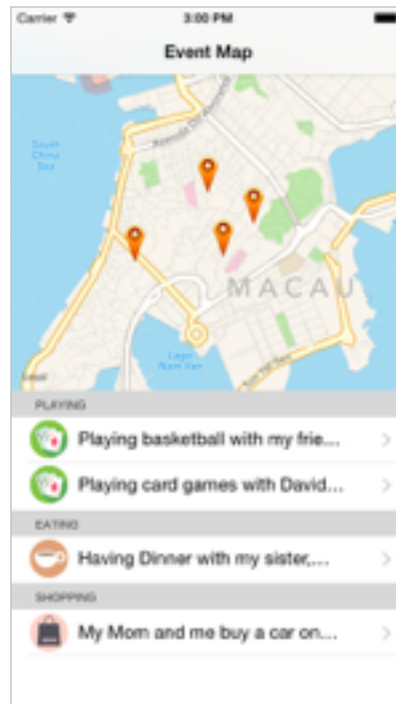

Advance - complete by yourself
Custom AlertView with three button
Custom Table View Cell **(Image, Event name)**
Custom AnnotationView **(Pin image, Callout Layout with left image and right button)**

Add Different sections (with title name) in tableview according to what the "Event" type you chose

Add Detail View: when you click the event List, it will appear a detail view where the detail information (1. Event type image and name , 2. Event, 3. coordinate (latitude, longitude) 4.map with coordinate with respect to the event location 5.textview to show the note about the events) would present.
